About the Schedule of Procedures

The Schedule of Procedures is a technical document written in a medical language intended for use by us to assess the eligibility of the proposed treatment and your claim. If the treatment you are having is a surgical procedure, it must be listed and identified in this Schedule of Procedures.

The policy terms and table of benefits of each customer's contract together with this Schedule of Procedures govern those surgical procedures that are covered in terms of the Policy Agreement.

If you choose to receive treatment that is not on the list of procedures, such treatments must be pre-authorized and approved by AXA before such treatment takes place. AXA has to agree that treatment.

You must submit Pre-Authorization at least 5 working days before you book that treatment.

We will pay for one surgeon and one anaesthetist for each operative (surgical) session. Should you involve more than one specialist or surgeon or anaesthetist present at the same operative (surgical) session, AXA shall also review the medical necessity in the management of such surgical problem or medical condition in terms of the different trained skills and complexity of the services provided as an identification to cover the total services. No additional benefit is payable for surgical assistants.

In view of clinical developments, we shall review the classification of procedures on an annual basis and the contents in the Schedule of Procedures may be subject to change without notice. Please contact the Customer Service Team for more advice if you require clarification on the listed procedures or if the procedure code does not appear on the list.

The contents in this document is correct at time of publication.

3 Spine, Spinal Cord And Peripheral Nerves

There are a large number of codes covering most clinical situations for spinal surgery. The various codes for spinal decompression, removal of disc fusion and instrumentation should be used singly and not combined except in very unusual circumstances.

Spinal fusion includes bone grafting and this should not be charged separately.

Spinal decompression includes removal of disc matter and rhizolysis. These should not be charged separately.

Spinal surgery is frequently multi-level. Multiple level surgery does not constitute a multiple procedure and will not be reimbursed as such except in the cervical region.

Chemonucleolysis includes discography and this should not be charged separately.

Codes V4100, V4120 and V4000 are for treatment where the primary pathology is idiopathic adolescent scoliosis. They are not for any other purpose and specifically not for correction of degenerative scoliosis.

The code for Posterior Lumbar Interbody Fusion is V3362 and the narrative has been amended to reflect this.

The benefit for cataract removal by the various approaches includes subconjunctival injection and injection into the anterior chamber where required. These should not be charged separately.

Retrobulbar injection. This code is for therapeutic retrobulbar injection. It is not for anaesthesia during cataract surgery.

We do not cover blepharoplasty and this should not ever be coded as correction of ptosis/eyelid reconstruction.

5 Ear, Nose And Throat

Septorhinoplasty is only eligible under certain limited circumstances for restoration of normal appearance immediately after trauma/tumour. The presence of nasal obstruction does not make a septorhinoplasty eligible for benefit. **We request that all such procedures are pre-authorised to avoid disappointment to policyholders.**

Uvulopalatoplasty is not included in our schedule and is not eligible under any circumstances for treatment of sleep apnoea.

FESS includes removal of nasal polyps, antrostomy and turbinate reduction and these should not be charged as extra.

Codes designed for use in theatre should not be used in the out-patient setting, for example nasal cautery or removal of foreign body from nose.

Packing of the nose should not be charged as extra with nasal surgery.

The code for Epley manoeuvre is solely for use by specialists and practitioners. Where a member has an appointment specifically to undertake the Epley manoeuvre we do not expect to receive a consultation charge. We do not expect to receive any charges from hospitals or facilities for this service unless they are billing on behalf of the service provider.

8.8 Heart – Cardiac Surgery

We will provide benefit for surgeon and anaesthetist standby during coronary angioplasty provided the surgeon and anaesthetist are physically present and have no other obligations at that time. There is a code AA588 for this purpose. Please note, however, should surgery become necessary we will not also reimburse a charge for standby.

The benefit for therapeutic interventional procedures such as angioplasty with stenting or ablation includes an amount for any diagnostic procedure performed on the same day. Transoesophageal echocardiography should not be charged as an addition with valve procedures.

We will not pay additional amounts for supervision of post-operative care by cardiologists. In exceptional circumstances we will consider charges but these must be justified and agreed with us before they are invoiced.

We acknowledge that the procedure K3580 - Trans catheter aortic valve implantation (TAVI) requires a multidisciplinary approach from a cardiologist and a cardio-thoracic surgeon.

10 Endoscopic Gastrointestinal Procedures

The benefit for endoscopic therapeutic procedures includes an amount for diagnostic endoscopy. This should therefore not be charged for separately.

The benefit for gastroscopy and sigmoidoscopy includes an amount for sedation.

Many pathological processes eg cholecystitis result in the formation of adhesions. Adhesiolysis is therefore part of these procedures. We no longer have a specific code for division of adhesions. When major problems due to adhesions are encountered, we request that a note of explanation is provided and we will give consideration as to whether we will pay additional benefit.

12 Urinary System And Male Reproductive Organs

We assume that the following (when required) are an intrinsic part of all endoscopic therapeutic procedures of the urethra, prostate, bladder, ureters and kidney. This includes not only procedures such as resection of bladder tumours and TURP but also insertion and removal of JJ stents, retrograde pyelography etc.

M4510	Diagnostic endoscopic examination of bladder (including any biopsy)
M7700	Diagnostic endoscopic examination of urethra (as sole procedure)
M3000	Endoscopic examination of ureter (+/- cystoscopy and insertion/removal of stent)

The following procedures are only eligible for benefit where the primary pathology being treated is a urethral stricture or otherwise in exceptional circumstances. Where the procedure represents gaining access for a cystoscope or other instrument, additional charges should not be made.

M7920	Dilatation of urethra (including cystoscopy)
M7940	Internal urethrotomy (including cystoscopy)
M5820	Dilatation of outlet of female bladder (with cystoscopy)

Generally we consider that the various procedures for extraction of calculi include cystoscopy, diagnostic ureteroscopy, retrograde pyelography and insertion of stent where required. We will consider making additional benefit available for difficult procedures on a case by case basis. This does not apply to insertion or removal of stent when performed at a different time from the main procedure. Charges should not be made for anaesthesia with flexible cystoscopy.

14 Female Reproductive Organs

The benefit for hysteroscopy includes an amount for D&C and insertion of mirena coil. We will not reimburse additional charges for this as a separate service. Similarly where a therapeutic hysteroscopy is performed, we will not reimburse an additional charge for a diagnostic hysteroscopy.

The benefit for hysterectomy for ovarian malignancy includes an amount for removal of omentum and this should not be listed as extra.

Cystoscopy should not be charged as an additional procedure with suspension/uro-gynaecological procedures.

We consider insertion of suprapubic catheter to be an intrinsic part of procedures such as a suprapubic sling or retropubic suspension of bladder neck and will not reimburse these as an additional procedure.

The benefit for colposcopy includes an amount for punch biopsy.

The benefit for therapeutic laparoscopy includes an amount for diagnostic laparoscopy.

The code for insertion of prosthesis into the ureter is designed for use by urologists inserting a stent and not for the circumstances where the ureter is being identified during hysterectomy. We recognise that this does involve some additional work and consider that a small uplift would be reasonable.

The code for division of adhesions is no longer in our Schedule. Adhesions are a part of a large number of gynaecological pathologies and the benefit for treatment includes an amount for division of adhesions. We do however accept that there are some cases where numerous dense adhesions add considerably to the complexity of a procedure and in such cases suggest an enhanced fee is submitted together with a note of explanation.

Postoperative analgesia is part of all surgery. We will not reimburse additional charges by surgeons or anaesthetists for wound infiltration with local anaesthetic.

15 Skin And Subcutaneous Tissue

When skin lesions are removed either by excision biopsy or wide excision, the resulting defect can usually be closed by primary suture. It is our view, therefore, that the primary closure is an intrinsic part of these procedures. When Mohs, Mohs micrographic surgery is performed, the resulting defect is normally of a size and shape that cannot be closed by primary suture. In these cases, a small skin graft or local flap is routinely performed. The benefit for the procedure includes an amount for flap closure. Where the lesion being removed is in a site which causes particular problems, we will allow flexibility, but we ask that sufficient clinical detail is provided with the claim to allow this to be taken into account.

Many excisions or excision biopsies are performed under local anaesthesia. This is considered by us to be intrinsic to the procedure and is not eligible for separate benefit. The fee payable for anaesthesia is for care of an unconscious or semiconscious patient during surgery and not for simple administration of an injection.

The codes for removal of malignant lesions should only be used where a malignant lesion is removed with a margin of normal tissue and a histology report confirms a malignancy.

16 Bones, Joints And Connective Tissue/Tendon Muscle

When a procedure code includes the narrative 'including arthroscopic', the majority of specialists do not make additional charges for either a diagnostic or a therapeutic arthroscopy and we do not consider these to be additional procedures (except in unusual circumstances).

We consider that decompression in the subacromial region which is frequently performed arthroscopically is covered by the code for subacromial decompression. This includes EUA, arthroscopy, and decompression of the subacromial region, excision of distal clavicle, reconstruction of acromioclavicular joint, acromioplasty and repair of a small rotator cuff tear. We will not routinely reimburse this as a multiple procedure although we will allow flexibility in individual cases. In such cases, we ask that sufficient clinical detail is provided to allow assessment by an orthopaedic consultant.

Knee arthroscopy. At most knee procedures, in addition to the main procedure, a number of lesser procedures are frequently performed such as excision of synovium, drilling of cartilage, removal of loose bodies, excision of plica lateral release etc.

EUA/MUA/Injection into joint. With all arthroscopies we consider that EUA/MUA and injection into joint are part of the procedure. The only circumstances we would reimburse as a multiple is where the injection is into a different joint and we ask that this is made clear on the invoice.

Application of plaster of Paris is part of any procedure where immobilisation is routine – e.g. fracture reduction, tendon repairs and various osteotomies. As a rule we will not reimburse extra charges for this procedure.

Where a procedure usually or frequently necessitates bone grafting, additional charges should not be made for this as a separate service.

There is a significant number of other areas where in our opinion orthopaedic procedures have been unreasonably disaggregated in the past. This particularly applies to shoulder procedures. Procedures on the distal clavicle, acromioclavicular joint, glenohumeral arthroscopy, bursas and rotator cuff repair should not be added to subacromial decompression.

Please note that all procedure codes and descriptions include the application of the first cast. For subsequent, additional application of cast use code in Fractures section (16.3).

Please also note that all procedure codes in the fixation/arthrodesis section have been moved to individual areas.

The following definitions are used throughout this section:

17 Interventional Radiology

Many therapeutic procedures necessitate a diagnostic procedure. For example, angioplasty cannot be performed without angiography. We will not reimburse additional charges for these diagnostic procedures unless a separate and distinct procedure took place.

We will not normally reimburse standby fees for these procedures. If it is felt to be clinically necessary to have a surgeon on standby, we request you contact us.

The code and narrative for all these procedures includes imaging guidance by one of the following methods: X-ray, CT/MRI, fluoroscopy or ultrasound.

If a vascular procedure is jointly performed by a surgeon and interventional radiologist then the benefit should be split between the two specialists. Separate charges should not be made.
